

Description

Exocet Gas Oil Extra is a gas oil (BS2869:A2) upgrade product formulated to allow modern diesel engines calibrated on EN590 DERV to run on red diesel. It also compensates for some of the deleterious effects of a higher FAME content e.g. tendency for water pick-up. The product will additionally enhance the performance of older vehicles.

Application

Exocet Gas Oil Extra is added to fuel at the rate of 1 litre of additive to 3,000 litres of fuel. The additive will counter any negative effects resulting from the introduction of the latest gas oil specifications, notably the reduction in sulphur content and the increase in the allowable FAME (biodiesel) content.

Typical applications are agricultural and horticultural machinery, construction equipment, airport vehicles and fork lift trucks.

The product is formulated from recognised fuel additive components and should not void an engine manufacturer's warranty. In fact, very many engine manufacturers now recommend the use of upgrade additives when red/green diesel is used.

Feature

- Increased cetane number

Benefits

- Easier starting
- Increased pulling power
- Smoother power delivery
- Reduced visible emissions (smoke)
- Improved combustion efficiency
- Aligns with modern engine calibrations

- Increased fuel lubricity

Benefits

- Compensates for sulphur reduction
- Protects against premature wear in fuel pumps and fuel injectors
- Reduces friction

- Enhanced water resistance

Benefits

- Prevents emulsions forming and resultant filter blockages
- Keeps water out of the fuel

All exocet™ branded products are available in a range of sizes to 1,000 litres
